CHAPTER ONE

USER

A user participating in the Prophecy Practicum.

```
class prophecypracticum.engine.user.User(name: str, email: str, my_id: int = 0, supplicant_id: int = 0, prophet_id: int = 0, prophecy_given: bool = False, prophecy_received: bool = False, prophecy_received_and_interacted: bool = False)
```

Bases: object

The user participating in the Prophecy Practicum.

Parameters

- **self.name** – Name of the user participating in the practicum.
- **self.email** – Email address of the user participating in the practicum.
- **self.my_id** – The users ID in the database.
- **self.supplicant_id** – The ID of this prophet's supplicant
- **self.prophet_id** – The ID of this supplicant's prophet.
- **self.prophecy_given** – A boolean that stores whether the prophecy has been recorded.
- **self.prophecy_received** – Marked True when prophecy is ready to read.
- **self.prophecy_received_and_interacted** – A boolean that stores whether this user has interacted with the prophecy they received.
- **self.this_week_prophecy** – This week's prophecy.

change_email_address (new_email: str) → None

Allow the user to update their email address.

Parameters new_email – The new email address to associate with the user.

change_name (new_name: str) → None

Allow the user to update their name.

Parameters new_name – The new name to associate with this user.

create_prophecy (prophetic_words: str = "", photo_location: str = "") → None

Create a prophecy object.

Should also set self.prophecy_given to True.

Parameters

- **prophetic_words** – The text of the prophecy.
- **photo_location** – The location of a photo prophecy.

email: str = None

get_email_address() → str

Return user's email address.

Returns The user's email address.

get_prophecy() → *prophecypracticum.engine.prophecy.Prophecy*

Return a prophecy object.

Need to change to get previous prophecies, but how to do that depends on how many weeks will be kept.

Returns A prophecy object.

get_suplicant_id() → int

Returns the supplicant ID.

Returns Supplicant ID

get_user_id() → int

Return the user ID

Returns The user's ID

is_practicum_complete() → bool

Determine whether the practicum is complete.

Returns True if completed and false if any step is incomplete.

my_id: int = None

name: str = None

prophecy_given: bool = None

prophecy_ready_to_read() → None

Let the user know there is a prophecy to read

prophecy_received: bool = None

prophecy_received_and_interacted: bool = None

prophet_id: int = None

set_suplicant_id(suplicant_id: int) → None

Sets the supplicant id number.

Parameters **suplicant_id** – The id number for the supplicant.

set_user_id(user_id: int) → None

Set this user's ID

Parameters **user_id** – The ID that will identify this user.

suplicant_id: int = None

CHAPTER
TWO

PROPHETCY

A prophecy.

```
class prophecypracticum.engine.prophecy.Prophecy(date_of_prophecy: date-time.datetime, prophecy_text: str = "", prophecy_photo: str = "", feedback_rating: int = 0, feedback_text: str = "")
```

Bases: object

The Prophecy Object.

feedback_rating is initialized to 0 as a check of whether feedback has been input.

Parameters

- **self.date_of_prophecy** – Date and time prophecy is created.
- **self.prophecy_text** – If the prophecy is text, it is stored here.
- **self.prophecy_photo** – If the prophecy is a photo, this is the path to find the photo.
- **self.feedback_rating** – Rating on a scale of 1-5 of how relevant the prophecy was.
- **self.feedback_text** – If feedback was given on the prophecy, store it as text here.

date_of_prophecy: datetime = None

feedback_rating: int = None

feedback_text: str = None

get_feedback_rating() → int

Return the feedback rating.

Returns The feedback rating.

get_feedback_text() → str

Return feedback text.

Returns Feedback text.

get_photo_location() → str

Return photo location on disk.

Returns The location of the photo on the disk.

get_text_prophecy() → str

Return prophecy text.

Returns The text of the prophecy

modify_photo_prophecy (*new_photo_location: str*) → None

Point to a new photo prophecy location.

Parameters **new_photo_location** – The new location for the photo.

modify_text_prophecy (*new_prophecy: str*) → None

Modify the text of the prophecy.

Parameters **new_prophecy** – The text of the new prophecy.

prophecy_photo: str = None

prophecy_text: str = None

set_feedback_rating (*rating: int*) → None

Set feedback rating for the prophecy.

Parameters **rating** – A 1-5 number representing the rating

set_feedback_text (*new_feedback_text: str*) → None

Set feedback text.

Parameters **new_feedback_text** – Feedback text for the prophecy.
